Projects

AUTOMATIC QUESTION PAPER GENERATOR

Tools-XAMPP Server, PHP , MySQL

Purpose of my project is to develop a system that can automatically generate a question paper. An Automatic Question Paper Generator system will allow college officials to automatically generate papers from an existing database of questionnaires. This system will have the ability to process different paper sets by default. The software is very useful for small and medium sized institutions. The software will use the database to compile a questionnaire where the database can contain thousands of queries. The software will generate random paper in such way that the question does not repeat itself.
